PROFESSIONAL PROFILE

Aspiring AI Automation Specialist with hands-on experience building personal projects using n8n, AI tools, APIs, and Python.

I independently define project requirements, design product logic, and develop user workflows. I use AI-assisted development to implement, debug, test, and improve solutions.

Familiar with API integrations, HTTP requests, JSON, Python fundamentals, and data processing. Focused on building practical automation systems and integrating AI into business workflows.

CORE SKILLS

AI Automation & Workflow Design
Building visual workflows in n8n; designing automation logic and process sequences; connecting services and configuring data exchange; integrating AI tools; designing Telegram bot logic and automated messaging; defining project requirements.

Artificial Intelligence & AI-Assisted Development
Using ChatGPT for technical and product tasks; breaking down complex tasks; AI-assisted code generation, review, and improvement; troubleshooting and validation; designing AI analysis logic; integrating language models into workflows.

APIs, Integrations & Data Handling
REST API and HTTP fundamentals; working with public APIs; reading and processing JSON; integrations with Binance, MEXC, and Bybit public APIs; data filtering; basic SQLite operations.

Python & Development Tools
Writing, reading, and editing Python code with AI assistance; running scripts and command-line tools; virtual environments and dependencies; basic Requests, Pandas, and NumPy; basic Pytest tests; reading errors and troubleshooting.

TOOLS & TECHNOLOGIES

n8n · ChatGPT · Python · REST API · HTTP · JSON · SQLite · Pandas · NumPy · Pytest · VS Code · PowerShell · Git · GitHub

PROJECT EXPERIENCE

01 / AUTOMATED TRADING SIGNALS BOT

n8n · AI · Telegram · Binance · MEXC · Bybit

• Independently developed the project concept and defined the logic for an automated system designed to identify trading opportunities.

• Defined liquidity and trading-volume criteria; retrieved market data through exchange APIs; used AI to analyze incoming data; designed signal generation and delivery through Telegram; structured workflows in n8n; tested scheduled execution on a VPS.

• AI-assisted development was used for technical implementation and integration configuration.

• Status: Temporarily paused while reviewing the trading strategy.

02 / CR13 AI ANALYST — CRYPTO MARKET ANALYSIS TOOL

Python · MEXC API · SQLite · Pandas · NumPy · Pytest

• Developing a tool for automated market data analysis and identifying potential trading setups in the futures market.

• Retrieving data through the public MEXC API; processing candlesticks and calculating technical metrics; working with ATR and confirmed local price extremes; filtering instruments by liquidity and spread; storing results in SQLite; writing and running basic automated tests.

• Status: In development.

PROJECT EXPERIENCE — CONTINUED

03 / TELEGRAM MINI APP — NANNY SEARCH SERVICE

Product Concept · UX Planning · Telegram Mini Apps

• Developed the concept for a digital platform that helps parents find and select nannies.

• Defined product functionality and structure; designed user scenarios for parents and nannies; planned profiles and search filters; designed booking requests requiring nanny confirmation; explored the business model and additional service features.

• Status: Software development in progress.

ABOUT ME

My professional background began in the construction industry, but over time my interests shifted towards technology, artificial intelligence, and automation.

I made a conscious decision to pursue a new career path because I see automation not just as a technology trend, but as a fundamental change in how people work, businesses operate, and products are built.

I started learning AI tools, n8n, and software development fundamentals independently. Over time, I moved from experimentation to building my own projects, defining their requirements and logic while using AI-assisted development to implement, test, and improve solutions.

I am interested not only in using existing tools, but also in understanding how to combine them into working systems, identify opportunities for automation, and turn ideas into practical solutions. My current goal is to grow in AI Automation and gain hands-on experience in real-world projects.

EDUCATION & ADDITIONAL INFORMATION

Vocational Education
Construction and Operation of Buildings and Structures

Languages: Russian — Native; English — A2 (Elementary).

Interests: Swimming · Gym / Strength Training · Exploring New Technologies.

Work preferences: Remote or office-based · Full-time or part-time · Open to relocation.
